

WHAT IS CLAIMED IS:

1. A portable communication apparatus, comprising:
 - a) first housing including an open space and a pair of hinge supports, the
5 open space having at least one opening, the hinge supports extending longitudinally and surrounding opposite sides of the open space;
 - b) a hinge axis extending across the open space;
 - c) a second housing including a first display, rotatably connected to the first housing to open from and close to the first housing; and
10 d) a third housing including a second display, extending in a longitudinal direction of the second housing to be accommodated in the open space to enable the third housing to rotate about the hinge axis;wherein the second display is always exposed regardless of an open and close state of the second housing to the first housing.
15
2. The portable communication apparatus according to claim 1, wherein the first housing has an upper surface including a plurality of keys and a microphone, and wherein the second housing has the lower surface including a speaker device.
20
3. The portable communication apparatus according to claim 1, wherein the third housing is integrally connected to the second housing.
4. The portable communication apparatus according to claim 1,
25 wherein the lower surface of the third housing protrudes from the lower surface of the second housing in a stepped shape.
5. A portable communication apparatus, comprising:
 - a) first housing including an open space and a pair of hinge
30 supports, the open space having at least one opening, the hinge supports extending

longitudinally and surrounding opposite sides of the open space;

b) a hinge axis extending across the open space;

c) a second housing including a first display and a second display;

wherein said first display and said second display are looked upward the
5 same direction, and said second display is always exposed regardless of an open
and close state of the second housing to the first housing.

6. The portable communication apparatus according to claim 5,
wherein the first housing has an upper surface including a plurality of keys and a
10 microphone, and wherein the second housing has the lower surface including a
speaker device.

7. The portable communication apparatus according to claim 5,
wherein the third housing is integrally connected to the second housing.

15

8. The portable communication apparatus according to claim 5,
wherein the lower surface of the third housing protrudes from the lower surface
of the second housing in a stepped shape.
